

FMS Quick Start Guide

Thank you for purchasing the Falcon FMS. This guide describes how to connect the FMS to the network, configure inputs and system settings, and set up email notification. The FMS User Guide, located at rletech.com, contains additional installation details. Any time you work with printed materials, consult our website first to ensure you have the most recent version of those documents.

If you need further assistance, contact RLE Technologies at support@rletech.com.

v2.2

Prepare for Installation

Consult your IT administrator and determine the following settings for your FMS:

Basic Communications

- IP Address _____
- Subnet Mask _____
- Default Gateway _____

Email Notifications

- Primary DNS _____
- Secondary DNS _____
- Mail SMTP Address (IP Address or Host Name) _____
- Mail Sender Address _____
- Mail Recipient Address (Up to 8 Recipients) _____

ESMTP For Email Authentication

- ESMTP User Name _____
- ESMTP Password _____
- Default Gateway _____

Access the Web Interface

Once all your power connections have been made, you are ready to configure the FMS via the web interface.

1. Plug the crossover cable (included with the FMS) into the computer that will be used to configure the FMS.

Note: This cable is not intended to be connected to a network hub.

2. Connect the other end of the crossover cable to the Ethernet port on the back of the FMS.

Note: You can also use the FMS's EIA-232 interface to access the FMS. Refer to the FMS User Guide (available at <http://www.rletech.com>) for instructions.

3. Write down the computer's current IP address, subnet mask, and default gateway. Change these items temporarily so that the computer can communicate with the FMS.

FMS default IP address: 10.0.0.188

FMS default subnet mask: 255.255.255.0

4. Access the FMS through a Web browser by typing the FMS's default IP address (10.0.0.188) into the location bar and pressing Enter.

Enter the following:

Default User Name: falcon (case sensitive)

Default Password: (No default password. Leave this field blank.)

5. From the top bar, select the Configuration Menu link. You will select menu options from the Configuration Menu for all configuration tasks described in this guide.

FMS V8.8 Demo Unit

★ You will use these items on the Configuration Menu to complete the tasks described in this quick start guide.

Configure Network Communications

IMPORTANT! Consult your IT administrator before performing these steps.

Click the Internet Protocol link in the Configuration menu to access the IP Configuration page.

FMS Default Values

IP address: 10.0.0.188

Subnet Mask: 255.255.255.0

1. Enter the values for IP Address, Net Mask (subnet mask), and Def Route (default gateway) provided by your IT administrator.

Once you enter the values and click the Submit Changes button, the FMS saves the changes and reboots. The system status LED on front of the FMS stops flashing.

2. Reset the computer to its original IP address and subnet mask.

Note: This step might require assistance from your IT administrator.

The computer and the FMS are now both configured to communicate on the network.

3. Connect the computer and the FMS to the network.

4. From the computer's Web browser, go to the new IP address of the FMS.

5. When prompted, enter the user name and password to verify network access to the FMS (as you did in step 4 in the previous section).

If the login window for the FMS does not display:

- A.** Verify that the cables are firmly attached.
- B.** Verify that you entered the correct IP address for the FMS.
- C.** Check for activity on the Link and Active LEDs on the front of the FMS as follows:

- If the Link LED is off, the FMS is not connected to the network. Check the cable connections.
- If the Active LED is on solid, too much data is being sent to the FMS for it to process. Consult your IT administrator.

Configure the Inputs

The eight non-isolated universal inputs are connected to TB2 and TB3. Universal input channels can be individually configured through the FMS to monitor a 4-20mA signal, a normally open (NO) dry contact relay, or a normally closed (NC) dry contact relay.

Make the Physical Connections

The following figure shows examples of input wiring:

Once you have wired the inputs, make note of the following:

- Sensor type (analog or digital) connected to each channel
- For each analog sensor - the high and low alarm thresholds.
- For each digital sensor - the non-alarm state: normally open (NO) or normally closed (NC).

Configure the Inputs

Use the Inputs and Relays page of the configuration menu to configure the inputs. Click on the underlined label for the input you would like to configure.

Relay Configuration

- A. An input can be Analog 4-20 mA or Digital NO, NC, or Status
- B. Applies only to analog inputs. Gain and offset are used by the FMS to convert temperature, humidity, etc. readings to a 4-20mA signal.
- C. Applies only to analog inputs. Hysteresis is the amount the reading of an alarming input must change before it's reported as returned to normal.
- D. Applies only to analog inputs - use Deg F, Deg C, %RH, Amps, Volts, PSI, etc. The UoM field displays on main menu and in alarm notifications.
- E. The raw reading as reported by the FMS and the calculated value based on the gain and offset settings.
- F. Applies only to Analog inputs. Set the one or two high and low alarm thresholds to designate the range you would like to monitor.
- G. The input label displays on the main menu and in the configuration menu.
- H. This link configures corresponding relay output behavior for this input.

- A. Refer to the information you collected from your IT administrator.
- B. Select subject text that you will easily recognize as notification from the FMS.
- C. Enter up to eight email recipients - either individual email addresses or distribution lists.
- D. This information is used for ESMTMP email authentication. Refer to the information you collected from your IT administrator.

Complete the Installation

Once you have completed the tasks in this quick start guide, the FMS can communicate over the network and monitor the inputs you configured. Consult the FMS User Guide at <http://www.rletech.com> for information about completing these additional tasks:

- System clock settings
- Network time protocol settings
- SNMP/Syslog settings
- Modbus/Telnet settings
- BACnet settings
- User administration
- URL links to IP-addressable devices
- Nest/Egg configuration (for additional FMS appliances that will be monitored by a central FMS appliance)
- Trends
- Alarm management
- Product registration
