

VALVE VT TECK

CHARACTERIZED BALL VALVE

CALIFLO®

Patented 6,910,673

The Widest Range of
Cv's Available 0.3 - 734

- Chilled Water
- Hot Water
- 15# Low Pressure Steam
- Mixing or Diverting

Typical Applications

- ▶ HVAC
- ▶ District Energy
- ▶ Zone Control
- ▶ Pressure Control
- ▶ Flow Control
- ▶ Low Pressure Stream
- ▶ AHU / Air Handlers

Characterized Flow Control

After years of research and flow testing, Valve Teck developed the Califlo® multiple Cv orifice for applications that require precise “maximum” Cv control. After additional investment and significant cycle testing, Valve Teck has pioneered the first brass body ball valve with stainless v-ball, for precise “minimum” Cv control.

Flow tests confirm the combination of a Califlo orifice with characterized v-ball valve achieves a deep equal percentage flow curve for unmatched temperature control stability. The advanced flow curve of the characterized v-ball exceeds the best performance of any globe valve on the market today.

Sizes 1/2"-2"

Sizes 2 1/2"-3"

Calibrated Flow

The Califlo® orifice is a flow control device that is used in conjunction with the Series 23/24 characterized NPT ball valve assemblies. The Califlo orifice reduces the maximum allowable inherent valve Cv to better match the desired HVAC system Cv for advanced temperature control.

The maximum Cv flow is controlled by the calibrated flow opening which is extended for improved laminar flow into the valve body. The Califlo orifices are constructed of brass and contain a precise "calibrated" opening consisting of different diameters to allow for multiple number of Cv's per valve size. The Califlo orifice allows flexibility to obtain the exact control that is necessary for HVAC applications.

Patented 6, 910, 673

Adjustable Packing Gland

The adjustable packing gland functions like a traditional valve packing gland. Metric standard sockets can be fitted over the brass hex head gland. A quarter turn of the gland, puts additional force on the PTFE v-cup packing to compress the PTFE packing and seal around the stem, for 100% field adjustability of the stem seal.

Bubble Tight Close Off

2-way and 3-way ball valves achieve 100% bubble tight close off and zero leakage through the ball (ANSI Class VI / 6). All valves are tested to the air under water MSS SP-110-2010 specification to ensure leak free service.

Field Retrofittable Cv Control

The Califlo® insert can be easily removed and replaced with another insert that will yield a different maximum valve coefficient without having to change out the complete valve assembly.

3-Way Bypass Equal Percentage Flow

Testing confirms with the Califlo® orifice located in the common "AB" outlet port of the valve, the 3-way ball valve is able to achieve true equal percentage flow in the bypass mode. The Califlo® orifice solves the bypass high pressure drop requirements by reducing the bypass Cv to an average of less than 80% of the through flow.

Triple Stem Seal

The bottom entry valve shaft is "blowout-proof" and will not allow the removal of the stem while the valve is under pressure. The PTFE teflon stem bearing prevents debris from entering the shaft area and maintains low run torque. The double EPDM o-rings act as the secondary seal, eliminating stem leakage and ensuring a long maintenance free service life. The EPDM o-rings self compensates with wear for high cycle applications. The third stem seal is an adjustable packing gland that keeps constant compression on a PTFE packing ring.

Optional Union Connections

Forged brass unions are cemented into the valve body and soldered into the piping arrangement for a leak free connection. EPDM gaskets provide a positive seal between the union body and the tailpiece.

- Maximum Working Pressure: 400 psi
- Service: Water, Glycol

Pressure / Temperature

|-------------|---------|
| 0 | 212° |
| 10 | 239° |
| 15 | 250° |

Equal Percentage Flow

For control stability in temperature control applications, valves must provide an equal percentage flow characteristic that in turn produces linear heat output. The characterized v-ball valve is a perfect choice for valve applications that require linear heat output.

The inherent flow characteristic of a valve describes the relationship between "flow capacity" of the valve and "percentage of opening", with a constant pressure drop. The characterized v-ball was tested at 10° increments with a 1 psi drop and the data was plotted with percent of maximum flow, versus percent of valve opening.

The test data in figure 4, shows the inherent flow curve the characterized v-ball valve exhibits is an equal percentage flow characteristic. With equal increments of the stem travel, at a constant pressure drop, an equal percentage change in existing flow occurs.

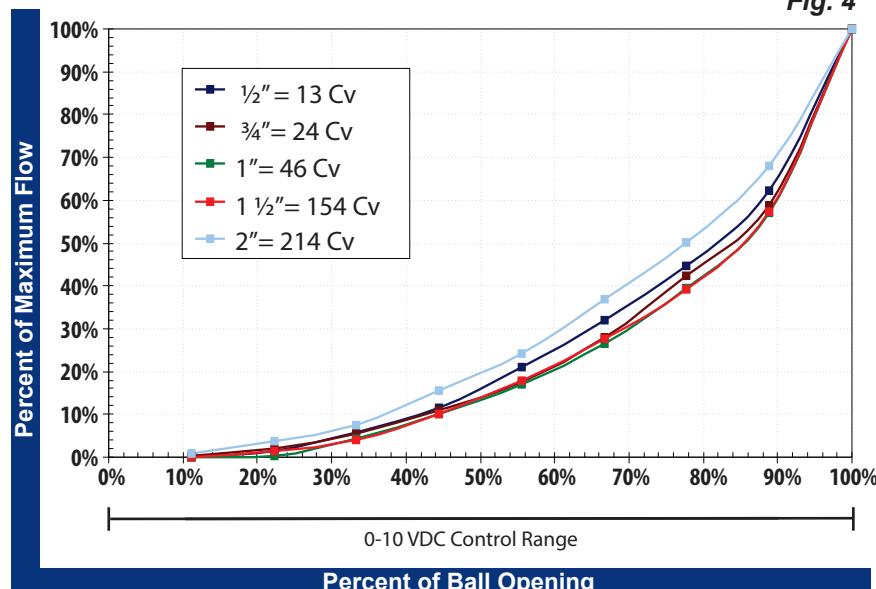

Fig. 4

Full Scale Rotational Response

The characterized v-ball and Califlo® orifice combination exhibits excellent "full scale rotational response". The test data shows the v-ball control valve has constant flow over the entire 90° control range of a 0-10 VDC input controller. With the Califlo insert, the full operating range is used because the desired Cv meets the actual Cv, resulting in system life span being increased and energy consumption reduced. Better valve control and valve sizing prevents "Hunting" of the control loop in which the system is constantly adjusting itself to maintain the predetermined set-point.

See Figure 4

High Rangeability

The term "rangeability" is defined as the "ratio of maximum controllable flow to minimum controllable flow". Valve rangeability is based on controllable flow of the valve and indicates if the valve is practical to throttle continuously. The Califlo insert controls the maximum controllable flow. The characterized v-ball controls the minimum controllable flow. The combination of Califlo orifice and characterized v-ball has the highest rangeability of any temperature control valve.

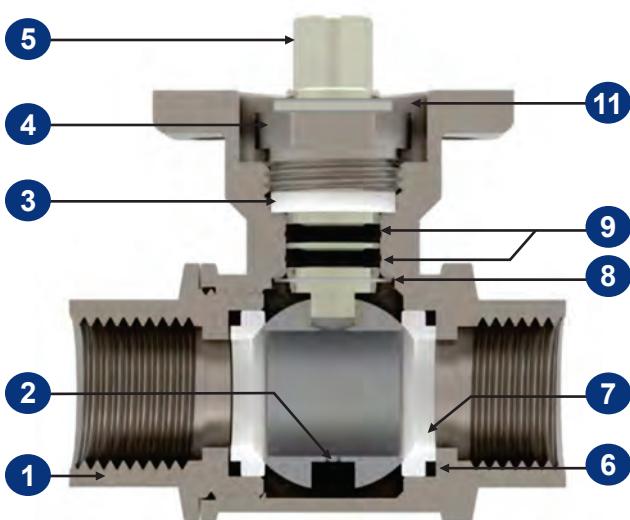

Materials of Construction

| Part | Description | Materials | |
|------|------------------|------------------------|---------------------------|
| | | 1/2" - 2" | 2 1/2" - 3" |
| 1 | Body / Nut End | Brass Nickel Plated | Bronze |
| 2 | Ball | 304 Stainless (V-Port) | 304 Stainless (Full Port) |
| 3 | Packing | PTFE | PTFE |
| 4 | Gland | Brass Nickel Plated | Brass |

| 7 | Seat | PTFE | PTFE |
| 8 | Stem Seal | PTFE | PTFE |
| 9 | O-Rings | EPDM | EPDM |
| 10 | Califlo® Orifice | Brass | Brass |
| 11 | E-Clip | Steel 65Mn | Steel 65Mn |

Valve Performance

- ISO extended mounting platform for high cycle automation and added clearance for insulation
- Double O-ring stem seal gives long maintenance-free service life and eliminates stem leakage
- PTFE seats and seals for maximum temperature of 320°F @ 0 psi
- Blow-out proof stem prevents removal of stem when valve is in service.
- Adjustable packing gland rides on PTFE packing and acts as a third stem seal that can be adjusted without removing actuator.
- Two-way valve body rated 600 WOG 1/2"-3"
- Three-way valve body rated 600 WOG 1/2"-1 1/4", 400 WOG 1 1/2"-2"
- Life cycle tested over 500,000 cycles (2 year warranty)

Sectional View

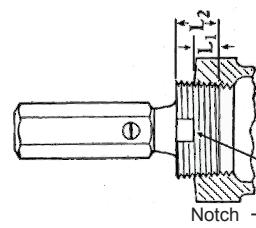

Exploded View

- Califlo® Complies with ANSI B2.1 American National Standard Taper Pipe Threads
- The external taper thread engagement is measured using a plug gauge.

L1 - Normal engagement by hand between external and internal threads
L2 - Length of effective external threads

| 8 | 3" | --- | C, D, E, X |

4. Flow Type

2 = Full Port
L = Califlo® Multiple CV Orifice

5. Construction (Body/Ball)

B = Brass Nickel Plated Body
304 Stainless Ball and Stem

6. Actuator

23 = Non-Spring 24 VAC Voltage
24 = Spring Return 24 VAC/DC Voltage

7. Controls

O = On/Off - Floating
E = Modulating 0-10 VDC input/output

8. Accessories

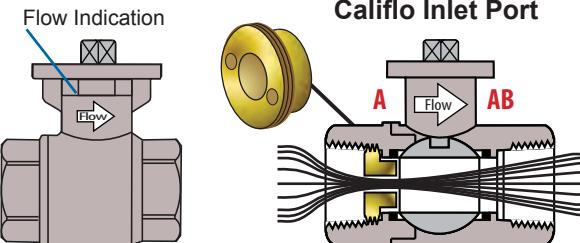

A = Auxiliary Switch 2-SPDT
V = 120 VAC Voltage (Series 24 Only)
F = Floating Control (Series 24 Only)
C = Stacon Connections
U = Unions

Note 1: Please Specify T-Port Mixing or T-Port Diverting Three-way.

Note 2: Minimum cable length 3 ft.

Flow Configuration

- ▶ **2-way non-spring return** modulating assemblies will be set up closed at 0 VDC and fail in last position on loss of power.
- ▶ **2-way spring return** modulating assemblies will be set up open at 0 VDC and will fail open (Unless specified closed)

Flow Configuration

All configurations are bi-directional close off. The mixing and diverting T-Port valves through port is equal percentage and the bypass port is linear and yields 80% of the flow of port A.

T-Port Default

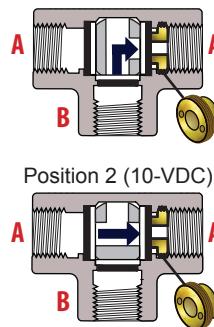

Non-Spring: Assemblies are set up B to AB Open at 0 VDC and will fail in last position, on loss of power.
Spring: Assemblies are set up B to AB Open at 0 VDC and will fail B to AB Open, on loss of power.

L-Port Default

Non-Spring: Assemblies are set up AB to A open at 0 VDC and will fail in last position, on loss of power.
Spring: Assemblies are set up AB to A Open at 0 VDC and fail AB and A Open, on loss of power.

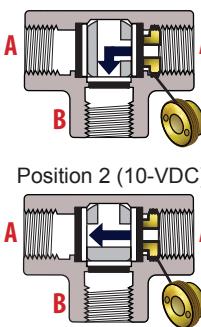

Mixing T-Port

Califlo AB Port
Position 1 (0-VDC)

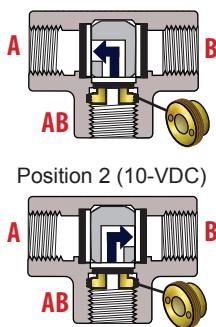

Diverting T-Port

Califlo AB Port
Position 1 (0-VDC)

Diverting L-Port

Califlo AB Port
Position 1 (0-VDC)

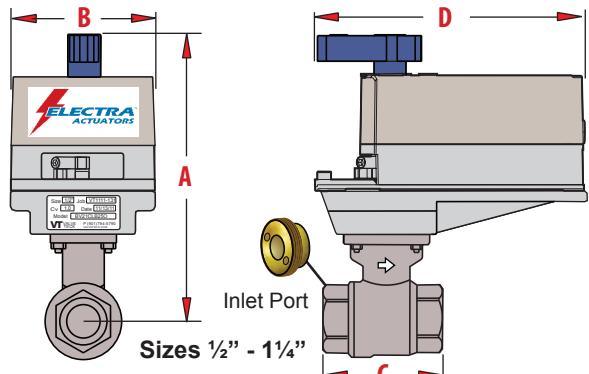

Gold Seal Warranty

The BV Series 23 / 24 Characterized V-Ball Valve with Electra® Actuator is warranted from defects in material and workmanship, under normal use and service for a period of (2) years from date of purchase. (see our complete terms and conditions)

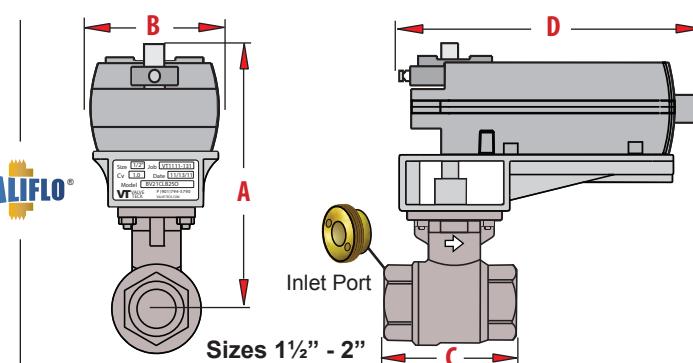

Series 23 / Non-Spring

Specification

Two-Way and Three-Way Valves

1. Valves $\frac{1}{2}$ " through 2" shall be forged brass body with nickel plating with female threaded NPT connections.
2. The ball and shaft are constructed out of stainless steel, with the stem being blow out proof design.
3. The valves seats shall be of PTFE Teflon® with an EPDM elastomer backing 100% bubble tight close off, class VI (6). Three-way valves shall have a (4)-seat design for bubble tight close off in the through port and by-pass port. Two-way and three-way valves that do not close off 100% will not be accepted.
4. Valves shall have an extended neck for insulation clearance.
5. The steam seal consisting of (2) EPDM O-rings are designed for long service life and to be maintenance free for the life of the valve. In addition to the O-rings, a PTFE packing ring with threaded adjustable packing gland shall be provided and allows for field adjustment of the packing without removing the valve from the line. The threaded adjustable packing gland will retain the packing under design pressure with the linkage removed.
6. On/Off control valves shall be sized for full port. Modulating / floating control valves shall be sized with a Califlo® "calibrated flow" orifice, that allows for accurate sizing, constructed of brass and threads into the ball valve and is blow out proof. The Califlo® insert achieves an equal percentage flow response in both 2-way and 3-way valves. 3-way ball valves bypass port is modified linear flow response which shall yield 80% of the inlet port. Valves with plastic disc held in place with snap rings are not acceptable.
7. Control valves shall have an ISO type 4 bolt flange for mounting the actuator in any orientation parallel or perpendicular to the pipe (not upside-down). A thermal air gap in the mounting kit shall separate the valve flange from the actuator and protect the actuator against extreme temperatures and condensation.
8. The mounting kit bracket and coupler shall also provide stable direct coupled mechanical connection between the valve and the actuator to prevent side loading forces from acting on the stem and packing material.
9. Two-way valve bodies $\frac{1}{2}$ "-2" rated for 600 WOG. Three-way valve bodies $\frac{1}{2}$ "- 1 $\frac{1}{4}$ " rated for 600 WOG, 1 $\frac{1}{2}$ "-2" rated for 400 WOG.
10. 2-way and 3-way valve assemblies are rated 200 psi close off against system pressure.

Actuators

1. Actuators shall be third party approved Underwriters Laboratories listed file number E35198 and CE compliant.
2. Actuators shall have NEMA 2 (IP54) enclosure for indoor and protected applications.
3. Actuators shall have position indicator and graduated scale on each actuator for travel confirmation.
4. The actuator shall be capable of providing the minimum torque required for 200 psi close off against system pump shut off head.
5. Each actuator shall have current limiting circuitry or microprocessor integral overload protection throughout the entire operating range in both directions to prevent damage to the actuator.
6. Each actuator shall have the ability to manually position the valve on loss of power.
7. Applications that require fail safe operation of the valve assembly shall use actuators with mechanical spring return and switchable from fail open, to fail closed in the field without actuator replacement.
8. Actuators shall function properly within a range of 85% to 120% of nameplate voltage with uniform movement of controlled device from limit to limit, when operated at rated voltage.
9. Actuator designed to be directly coupled to the valve shaft with self-centering shaft jaws that ensure maximum torque transfer without slippage. The actuator should be mounted to the valve with at least two points of attachment.
10. Optional auxiliary switches are integral inside the actuator.
11. Actuator motors shall be brushless DC motor technology type. Brushed motors are not acceptable.
12. Modulating actuators shall accept a 0-10 VDC input signal and provide a 0-10 VDC output signal to confirm valve travel. Actuators are capable of stopping at all points across the full range and starting in either direction from any point in the range.
13. All actuators shall have a minimum 3-foot cable for easy installation into a junction box.
14. Reinforced nylon gearing with steel shafts and copper alloy bearings that are pressed into the actuator enclosure that is greased for long service life.
